

| COUNT        | FINDING                           | PROVENANCE                                  |
|--------------|-----------------------------------|---------------------------------------------|
| <b>15/16</b> | cells favor the regulated arm     | 4×4 matrix · sign of the paired difference  |
| <b>13/16</b> | reach $p < .05$                   | paired t, df = 16, per cell                 |
| <b>11/12</b> | off-diagonal (cross-family) cells | no self-judge in numerator                  |
| <b>4/4</b>   | recovery replicates               | arousal resets by T8, every cook, S4 + S5   |
| <b>1</b>     | null cell, reported               | GPT × Gemini, -0.04 (n.s.) · not a reversal |

each model serves as both generator (cook) and judge · deterministic governor on vs off · counts derive from the sealed record
